Project Initialization and Planning Phase

Date	30 June 2026
Team ID	PNT2022TMID124356
Project Title	Credit Card Approval Prediction
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) Report

The proposal aims to improve the credit card approval process using machine learning by providing fast, accurate, and reliable predictions. It reduces manual effort and helps make better approval decisions through a real-time prediction system.

Project Overview	
Objective	Develop a machine learning model to predict whether a credit card application will be approved or rejected.
Scope	Build a Flask-based web application for real-time credit card approval prediction.
Problem Statement	
Description	Manual credit card approval is slow and may lead to inconsistent decisions.
Impact	An automated system improves accuracy, reduces processing time, and supports better decision-making.

Proposed Solution	
Approach	Use machine learning to analyze applicant details and predict credit card approval through a Flask web application.
Key Features	Real-time prediction, automated decision-making, and user-friendly interface.

Resource Requirements

Resource Type	**Description**	**Specification/Allocation**
Hardware		
Computing Resources	CPU	Intel Core i5 or higher
Memory	RAM	8 GB
Storage	Storage	256 GB SSD
Software		
	Framework	Flask
	Libraries	scikit-learn, pandas, numpy, joblib
Development Environment	IDE	VS Code / PyCharm / Jupyter Notebook

Data		
Data	Dataset	Credit Card Approval Dataset (CSV)
