Coding & Solution

Coding & Solution

This section evaluates the quality and completeness of the **Credit Card Approval Prediction** system. The project demonstrates a working Flask-based web application with a Machine Learning model for accurate credit card approval prediction.

Instructions:

1. Ensure the code is well-structured and follows clean coding practices.
2. Implement all key functional requirements of the project.
3. Include all source code and required files (model, scaler, templates, etc.).
4. Provide the GitHub repository link and setup instructions to run the application.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/shaikshaguftharabbani/Credit-Card-Approval-Prediction
Programming Language(s)	Python, HTML, CSS
Framework(s) Used	Flask, Pandas, NumPy, Joblib
Key Features Implemented	User-friendly web interface, Credit card approval prediction using Machine Learning, Data preprocessing, Label encoding, Feature scaling, Real-time prediction results
Pending / Incomplete Features	User authentication, Database integration, Prediction history, Cloud deployment

Setup / Run Instructions	Install required libraries using `pip install -r requirements.txt`, place all project files in one folder, run `python app.py`, and open `http://127.0.0.1:5000` in a web browser.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

- Developed by a **team of 5 members**.
- The application uses a trained **Machine Learning model** to predict whether a credit card application will be **approved or rejected** based on applicant details.
- The system performs **data preprocessing, categorical encoding, feature scaling, and real-time prediction** through a Flask web application.
