

Code-Layout, Readability and Reusability

Date	30 June 2026
Team ID	XXXXXX
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Code Layout, Readability and Reusability:

This document evaluates the quality of the **Credit Card Approval Prediction** project's code. The application follows a well-organized structure with meaningful variable names, proper comments, and reusable modules, making it easy to maintain, understand, and enhance in the future.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform spacing/tabs used throughout	Yes	Proper indentation maintained in all Python files.
2	Proper File Structure	Files and folders are logically organize	Yes	Flask project contains app.py, templates, model files, and dataset in separate folders
3	Meaningful Variable Names	Variables reflect their purpose clearly	Yes	Variables like feature_columns, prediction, input_data, and result are meaningful.
4	Function / Method Names	Functions are descriptively named	Yes	Functions such as home() and predict() clearly describe their purpose.
5	Code Comments	Inline and block comments explain log	Yes	Comments are provided for loading models, preprocessing, encoding, scaling, and prediction.
6	Modular Design	Code is split into reusable functions	Yes	Separate model, scaler, encoders, dataset, and HTML templates improve modularity.
7	No Redundant Code	Duplicate or unused code is removed	Yes	The application contains only necessary code for prediction.
8	Error Handling	Exceptions and errors are handled	Partial	Basic exception handling is implemented during label encoding.

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technolog	yWhere Reused	Reusability Level (High / Medium / Low)
1	Flask Application (app.py)	Python, Flask	Web application backend	High

2	Machine Learning Model (model.pkl)	Scikit-learn	Credit card approval prediction	High
3	Feature Scaler (scaler.pkl)	Scikit-learn	Data preprocessing before prediction	High
4	Label Encoders (label_encoders.pkl)	Scikit-learn	Encoding categorical input values	High
5	HTML Templates (index.html, result.html)	HTML, CSS	User interface for data input and prediction result	High

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	5	Well-organized Flask project with a clear folder structure.
Readability	5	Clean, readable code with meaningful variable and function names.
Reusability	5	Models, preprocessing components, and templates can be reused easily.
Documentation / Comments	5	Sufficient comments are provided to explain important sections of the code.
Overall Score	4.8/5	The Credit Card Approval Prediction system follows good coding practices and is easy to maintain and extend.
