

No. of Functional Features Included in the Solution

Date	30 June 2026
Team ID	XXXXXX
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Functional Features Overview:

This document presents the key functional features implemented in the **Credit Card Approval Prediction** system. Each feature is designed to support the accurate and efficient prediction of credit card approval using machine learning. The document outlines the purpose of every feature, its implementation status, and its contribution to the overall functionality and performance of the solution.

S.No	Feature Name	Feature Description	Module / Component	Status (Done / In Progress / Pending)	Marks Contribution
1	User Input Form	Collects applicant details such as income, age, employment, and credit information through a web form.	Frontend (HTML/Flask)	Done	1
2	Data Preprocessing	encodes categorical values, converts numeric data, and scales features before prediction.	Preprocessing	Done	1
3	Credit Card Approval Prediction	Uses the trained Machine Learning model to predict whether the credit card application is approved or rejected.	ML Model	Done	1
4	Result Display	Displays the prediction result as Credit Card Approved or Credit Card Rejected on the result page.	Flask Backend	Done	1
5	Model Integration	Integrates the trained model, scaler, and label encoders using Joblib for real-time prediction.	Backend Integration	Done	1

Feature Summary:

Metric	Count / Value
--------	---------------

Total Features Planned	5
Total Features Implemented	5
Core / Must-Have Features	5

Additional / Nice-to-Have Features	0
Features Tested & Verified	5

Feature Category Breakdown:

S.No	Category	Features in Category	Example Features
1	User Interface (UI)	1	Applicant Input Form
2	Backend / Logic	2	Data Preprocessing, Result Generation
3	Database / Storage	1	Loading Dataset, Model & Scaler Files
4	API / Integration	1	Flask Integration with Machine Learning Model
5	Security / Authentication	0	Not Implemented
