

Demonstration of Proposed Features

Date	1 July 2026
Team ID	XXXXXX
Project Name	Credit Card Approval Prediction
Maximum Marks	1 Mark

Demonstration of Proposed Features:

This document captures all the features proposed during the development of the **Credit Card Approval Prediction** system and records their implementation and demonstration status. The project uses Machine Learning to predict whether a credit card application will be approved or rejected based on applicant details.

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	User Input Form	Allows users to enter applicant details through a web interface.	Implemented	Yes	Successfully accepts all required inputs.
2	Data Preprocessing	Encodes categorical values and scales numerical features before prediction.	Implemented	Yes	Uses Label Encoders and Standard Scaler.
3	Machine Learning Prediction	Predicts credit card approval using the trained ML model.	Implemented	Yes	Generates accurate approval/rejection results.
4	Result Display	Displays whether the credit card application is approved or rejected.	Implemented	Yes	Results shown instantly on the web page.
5	Flask Web Application	Provides an interactive web application for users to access the prediction system.	Implemented	Yes	Successfully deployed and tested locally.
6	Error Handling	Handles invalid or missing user inputs during prediction.	Implemented	Yes	Prevents application crashes and ensures smooth execution.

Feature Implementation Summary:

Total Features Proposed	6
--------------------------------	---

Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%
